SUPPLEMENT 7

This publication represents the views and expert opinions of an IARC ad-hoc Working Group on the Evaluation of Carcinogenic Risks to Humans, which met in Lyon, 10-18 March 1987

In 1969, the International Agency for Research on Cancer (IARC) initiated a programme on the evaluation of the carcinogenic risk of chemicals to humans involving the production of critically evaluated monographs on individual chemicals. In 1980 and 1986, the programme was expanded to include the evaluation of carcinogenic risks associated with exposure to complex mixtures and other agents.

The objective of the programme is to elaborate and publish in the form of monographs critical reviews of data on carcinogenicity for agents to which humans are known to be exposed, and on specific exposure situations; to evaluate these data in terms of human risk with the help of international working groups of experts in carcinogenesis and related fields; and to indicate where additional research efforts are needed.

This programme is supported by PHS Grant No. 5 UO1 CA33193-05 awarded by the US National Cancer Institute, Department of Health and Human Services. Additional support for the production of this volume was provided by the Commission of the European Communities.
